

FINEVET DR 9

The Innovative Digital Veterinary System

FineVet DR 9

State of the art and true innovation in every sense. Never before has veterinary imaging seen a system so streamlined and compact, built to rugged exacting standards with every attention to detail, providing all the functionality essential to small animal practices. The Finevet DR9 system and associated system components also provides veterinarians with a complete upgrade path, whether it be to an existing film or CR environment. Hardware, software and image processing modules meld together seamlessly to produce images with incredible detail.

► IMAGE QUALITY

- Rayence 9M pixel Flat Panel Detector (Csl, A-Si TFT Technology)
- Full Field 17x17 inch or removable 14x17 inch flat panel.
- Integrated into table body or your existing table.

► VETERINARY DEDICATED SOFTWARE

- Fast & Convenient registration of patients and examination protocols.
- Fully configurable to suit individual requirements.
- Unrivalled power and simplicity of our exclusive acquisition user interface.
- Outstanding image quality through our exclusive image processing engine

► SMART DESIGN

- Streamlined & Compact
- Built to withstand the most demanding environments

► PATIENT THROUGHPUT

- Images conveniently displayed on the Touch Screen Operator Console
- Instantly available for repeat exposures
- Eliminate costly retakes

► REDUCED EXPENSE

- No more film and chemistry costs
- Save dark room space
- Increase your capabilities

► AFFORDABLE QUALITY

FINEVET DR 9

Dimensions

System Description

Finevet DR9 will give your practise the solution that it needs. Images of the highest possible quality at the lowest possible dose.....fast. Essential elements only made possible through flat panel DR detector technology which provide industry leading detection efficiency (DQE).

Film and chemistry costs and that choking darkroom are a thing of the past. Finevet will deliver all the imaging needs to your practise in a compact and functional environment. Patient throughput is vastly accelerated and DR9 even eliminates the need for a separate generator control. Everything is integrated into one simple to use PC workstation.

Do not forget the importance of where your X-rays are generated from!! Without a reliable X-ray generator your system is dead in the water. Finevet systems are coupled with the 32kw or 40kw/50kw (option) CMP200 generator from CPI Canada. CPI is the worldwide leader in generator technology, unsurpassed in reliability with more installed systems worldwide than any other manufacturer.

Is it affordable??.....you be the judge and be pleasantly surprised.

Specifications

ImageMatrix

9 Megapixels (3072*3072)
Rayence 1717SCC Flat Panel
Detector

Acquisition Time

Within 3.5 seconds after exposure

Table

Longitudinal Stroke: ±9.8 in. (±250mm)
Transverse Stroke: ±2.4in. (±60mm)
Animal Weight: 330lb. (150kg)

Compatibility

DICOM compliance enables integration to PACS
